

# AppleScript Studio Introduction

Session 902

# AppleScript Studio Introduction

**Tim Bumgarner**  
**AppleScript Studio Engineer**

# Agenda

- Introduction
- Building a Studio Application
- Enhancing a Cocoa Application
- Using other languages
- Future features
- Q&A

# Introduction

- What is AppleScript Studio?
- What can you do with Studio?

# What Is AppleScript Studio?

- It is a combination of:
  - The AppleScript language
  - Project Builder
  - Interface Builder
  - The Cocoa application frameworks
- It is a development tool for building native Mac OS X applications
- It is a runtime system for running Studio applications

# AppleScript Studio Components

**Runtime Component**

**Development Components**

# AppleScript Studio Components

## Runtime Component

**AppleScriptKit**

## Development Components

# AppleScript Studio Components

## Runtime Component

**AppleScriptKit**

**Contains the Script Suites**

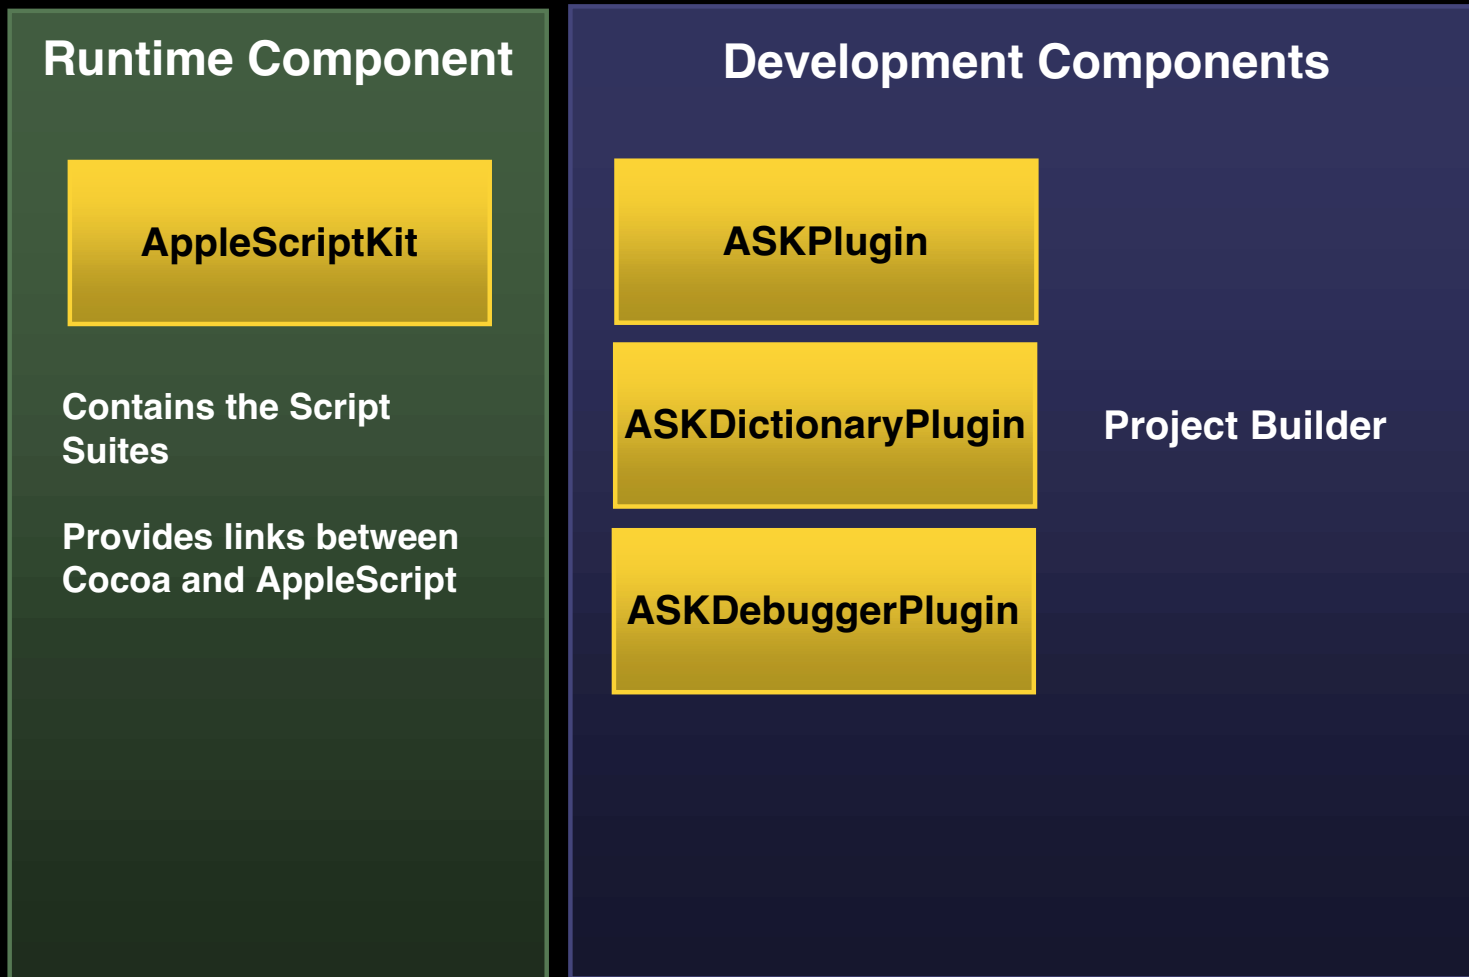

**Provides links between Cocoa and AppleScript**

## Development Components

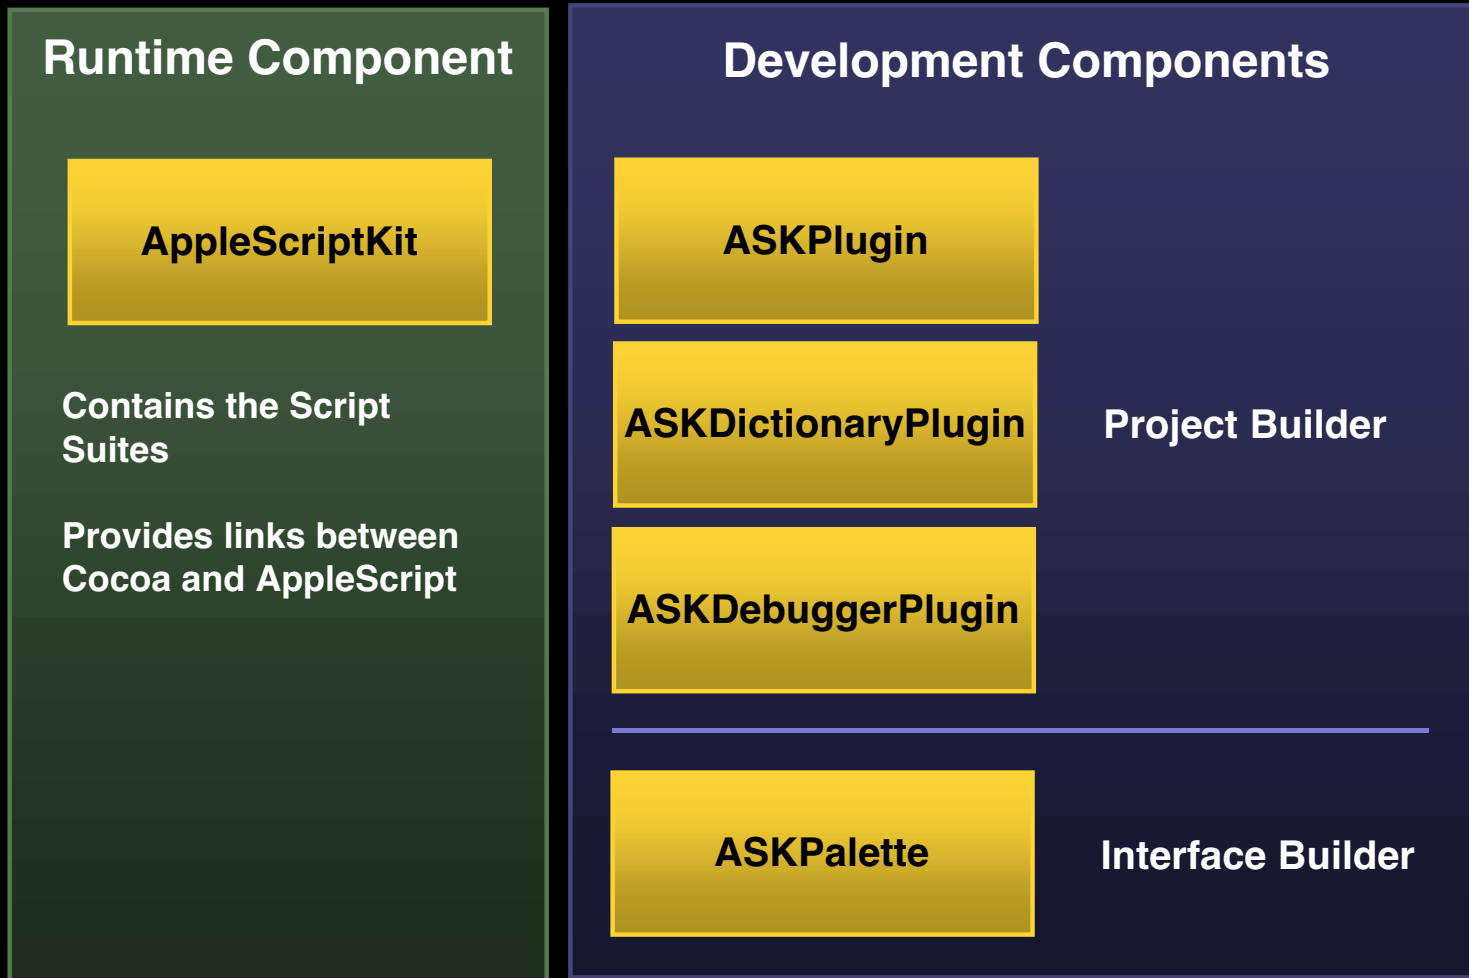

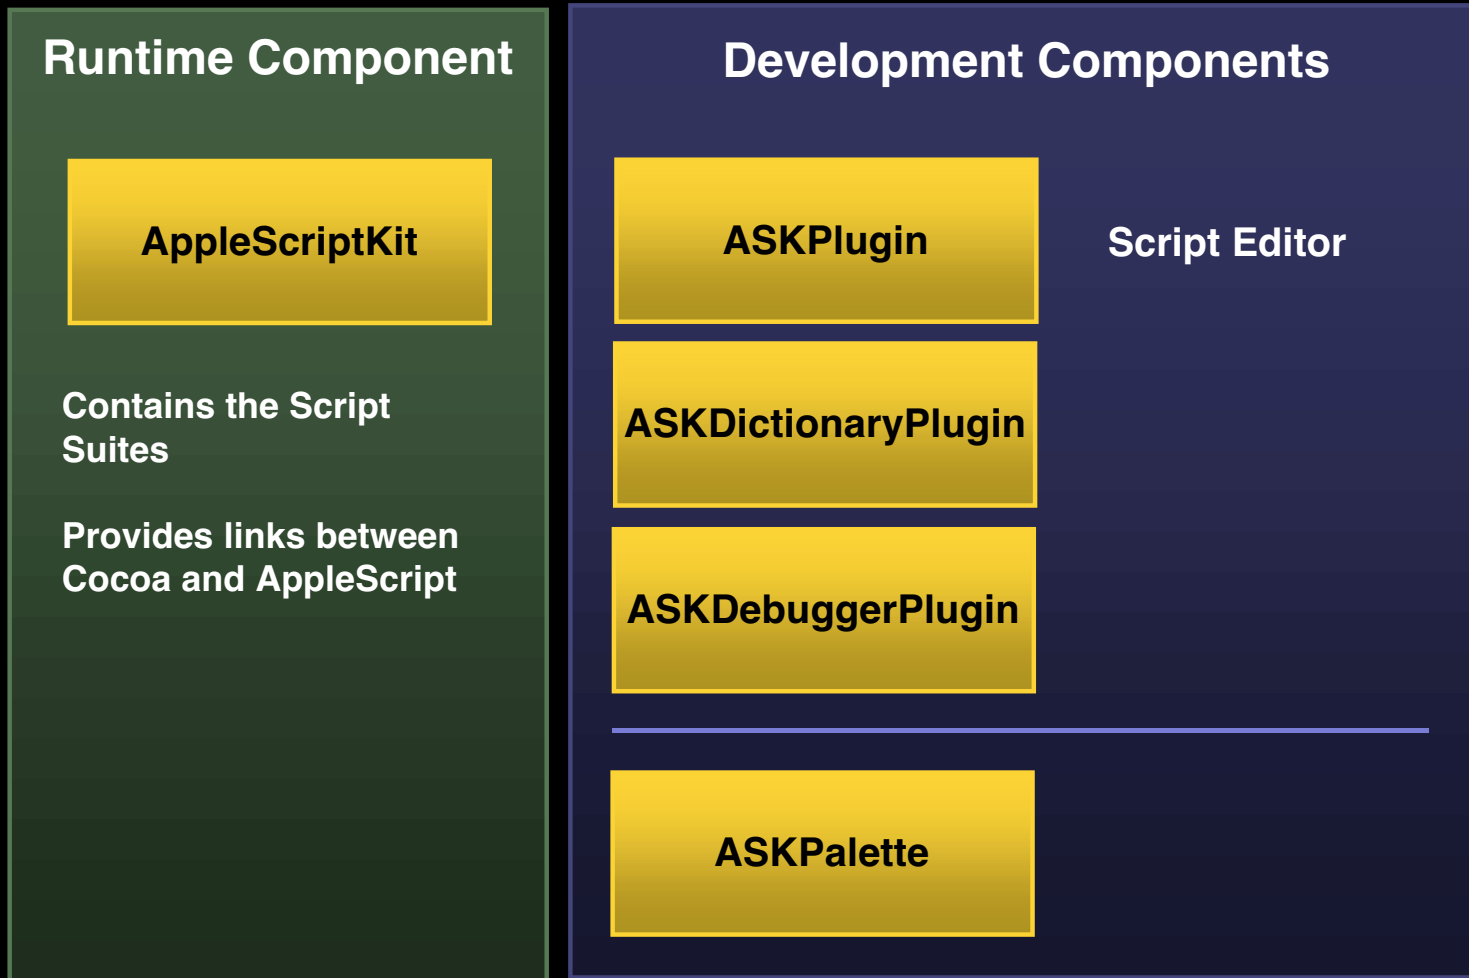

# AppleScript Studio Components

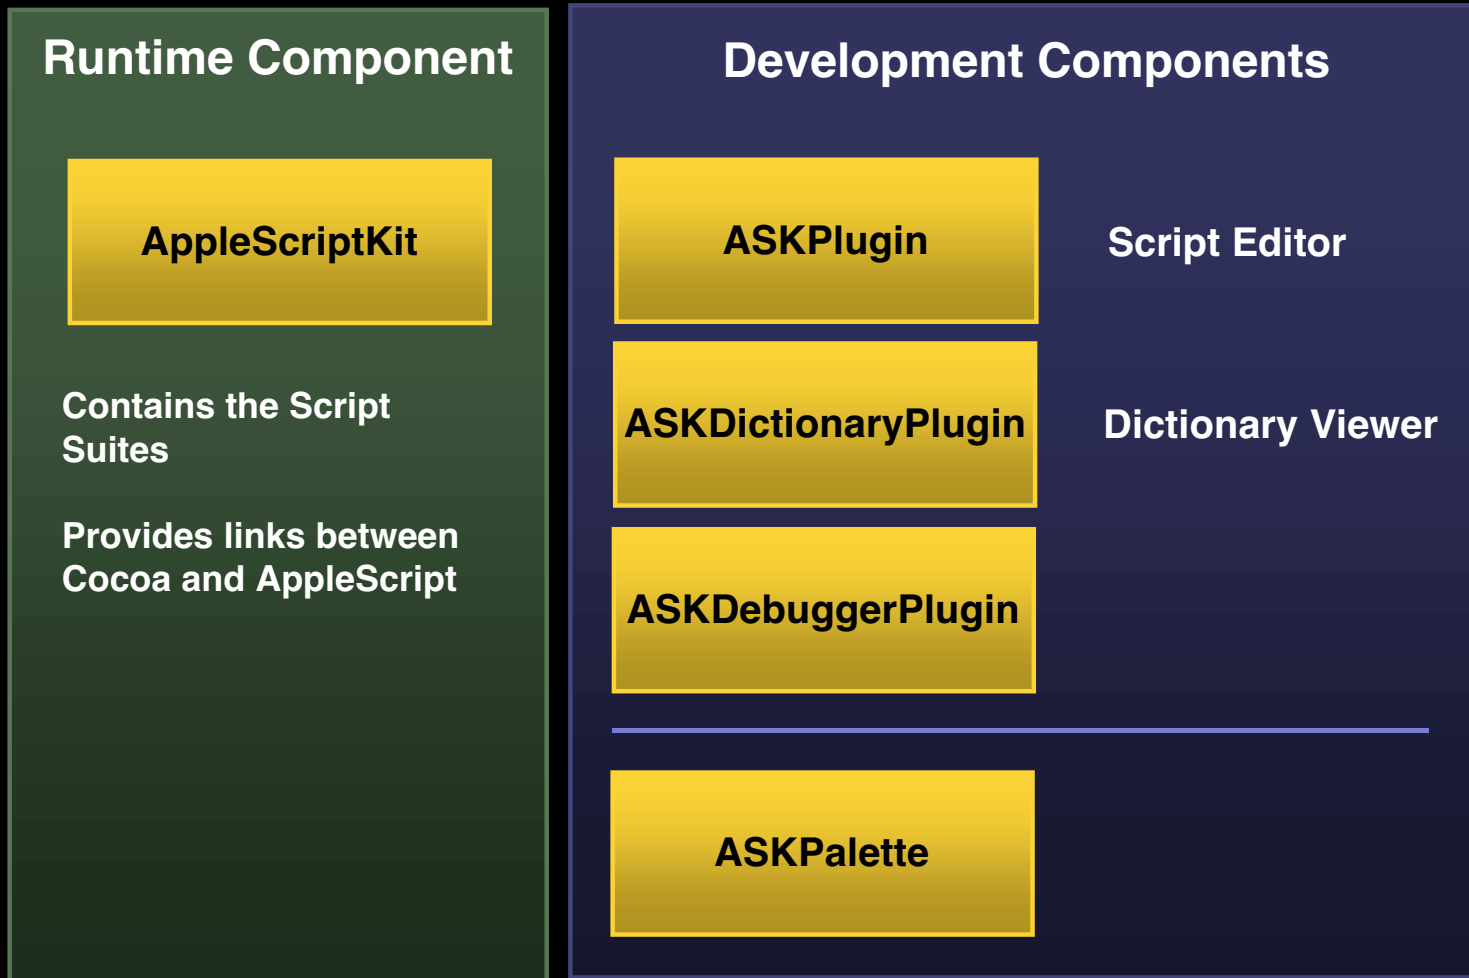

# AppleScript Studio Components

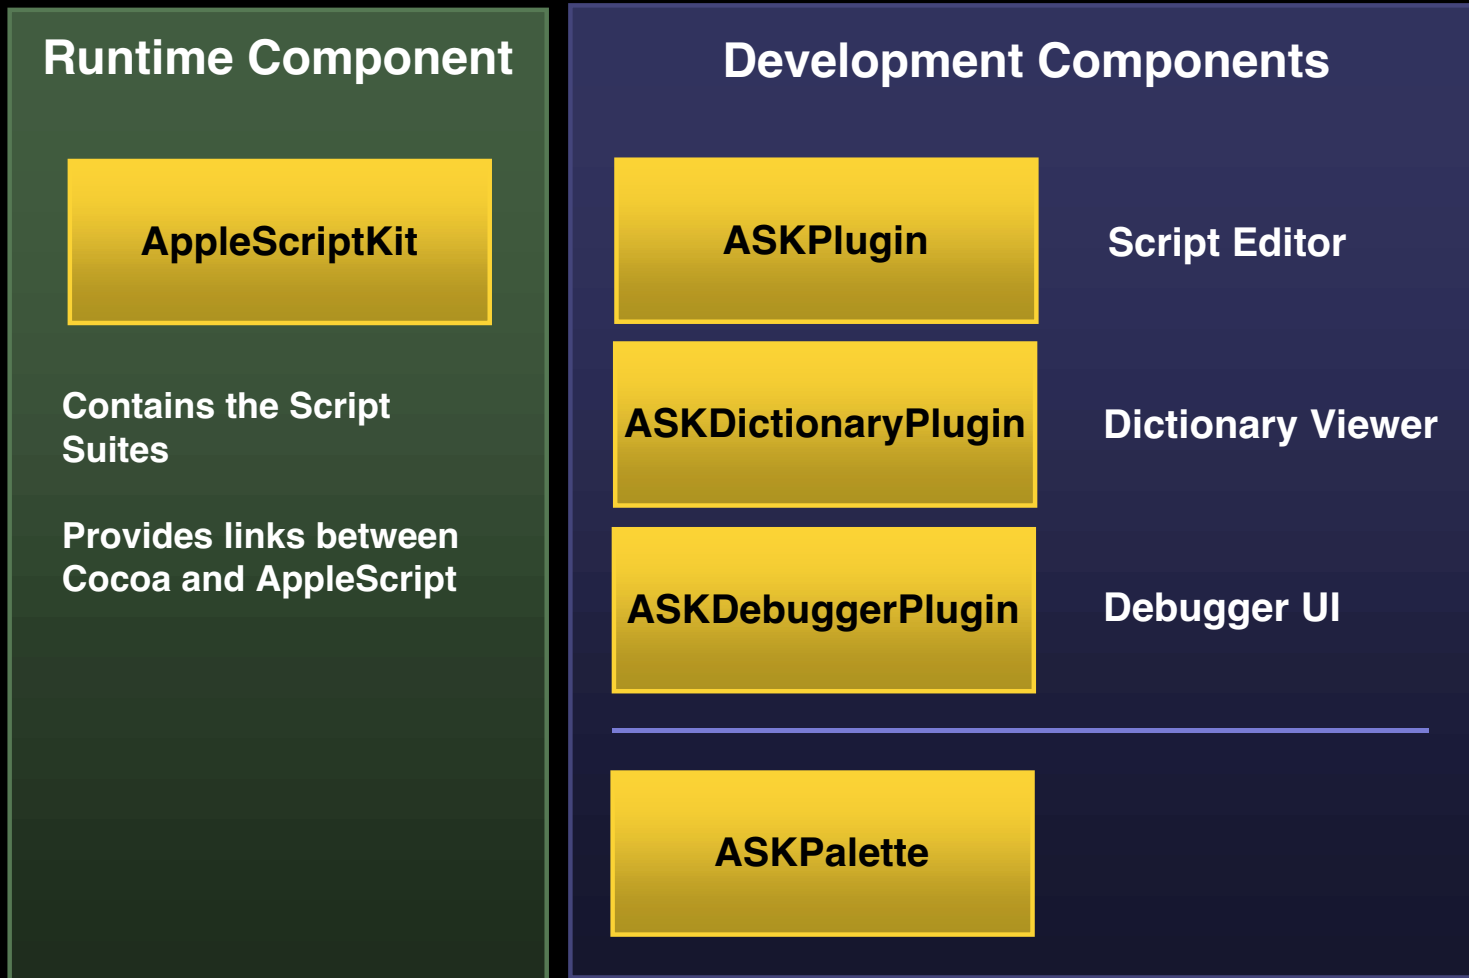

# AppleScript Studio Components

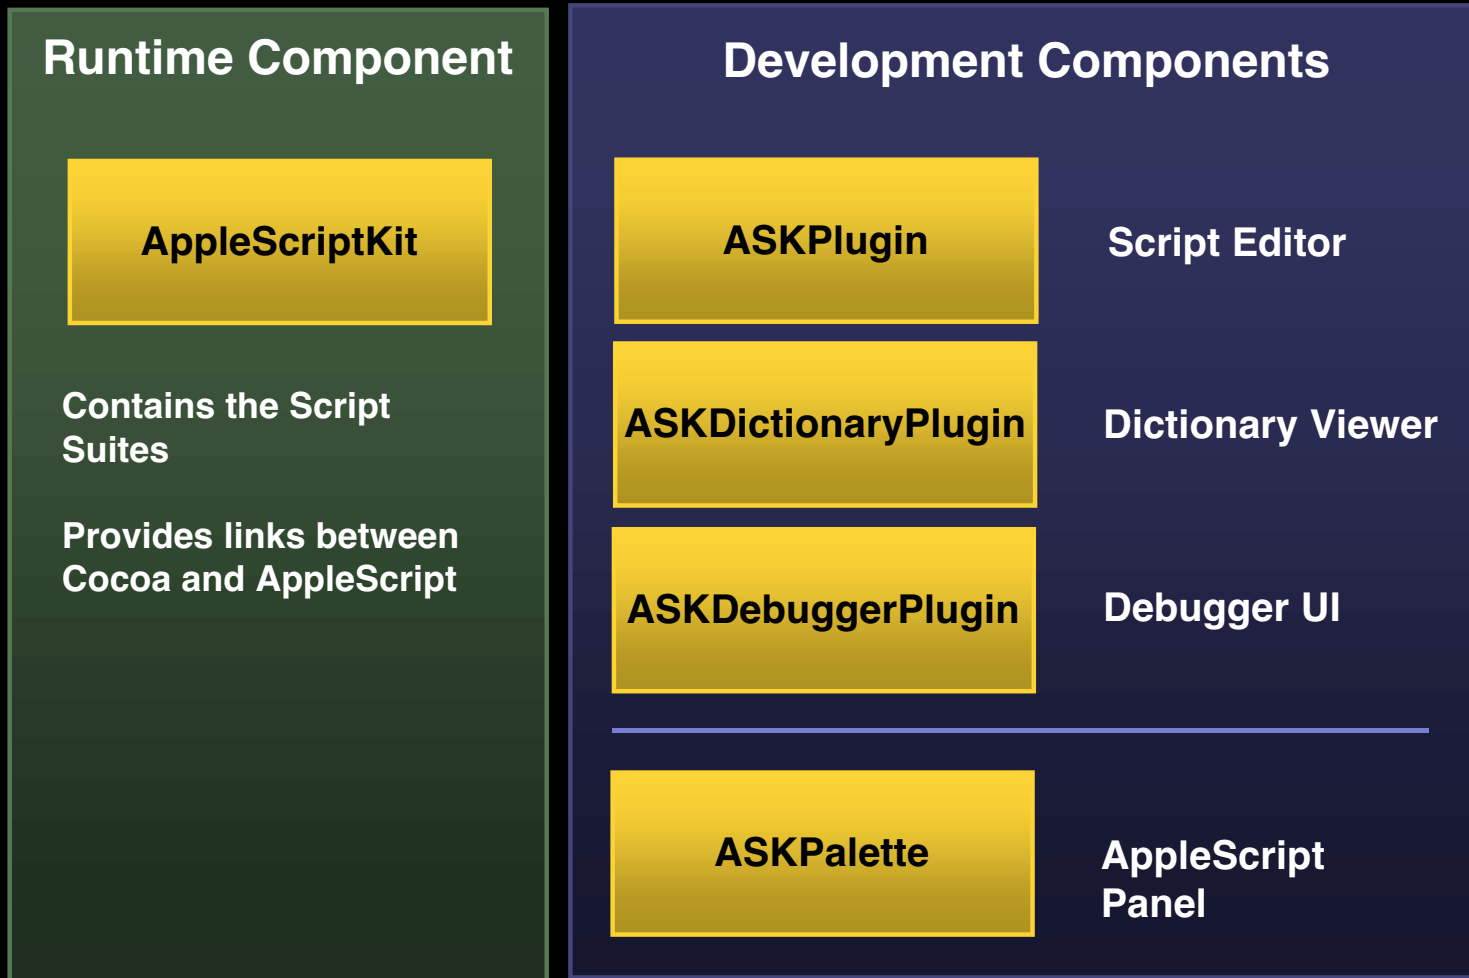

# AppleScript Studio Components

# AppleScript Studio Components

# AppleScript Studio Components

# What Can You Do With Studio?

# What Can You Do With Studio?

- Create Native Mac OS X Applications
- Take advantage of Cocoa's rich user interface
- Control other scriptable applications, both locally or across the network
- Use Web services

# What Can You Do With Studio?

- Talk to the shell using 'do shell script'
- Leverage code from other development languages, such as C, C++, Objective-C, Objective-C++ and even Java

# Building a Studio Application

- Create a Currency Converter
- Enhance it with some SOAP

# Demo

**John Coelho**  
**AppleScript QA Manager**

# Enhancing a Cocoa Application

- Start with the Sketch example
- Add the AppleScriptKit Framework
- Add an AppleScript Build Phase
- Add a “Change Color” Panel

# Demo

**John Coelho**  
**AppleScript QA Manager**

# Using Other Languages

- You can call functions/methods in the following languages:
  - C, C++, Objective-C, Objective-C++ and Java (directly and through the Java Bridge)
- The 'call method' command is the key

# Call Method

- Two major forms
  - call method “method\_name”  
[of object(some\_object)]  
[with parameter/parameters]
  - call method “class method\_name”  
[of class “some\_class”]  
[with parameter/parameters]

# Call Method

- Two major forms
  - call method “method\_name”  
[of object(some\_object)]  
[with parameter/parameters]
  - call method “class method\_name”  
[of class “some\_class”]  
[with parameter/parameters]

# Call Method

- Two major forms
  - call method “method\_name”  
[of object(some\_object)]  
[with parameter/parameters]
  - call method “class method\_name”  
[of class “some\_class”]  
[with parameter/parameters]

# Call Method

- Examples of object methods

**call method “title” of object button 1**

**call method “setTitle:” of object button 1 with ↵  
parameter “Testing”**

**call method “selectRow:byExtendingSelection:” of object ↵  
table view 1 with parameters {1, true}**

# Call Method

- Examples of object methods

**call method “title” of object button 1**

**call method “setTitle:” of object button 1 with ↪  
parameter “Testing”**

**call method “selectRow:byExtendingSelection:” of object ↪  
table view 1 with parameters {1, true}**

# Call Method

- Examples of object methods

**call method “title” of object button 1**

**call method “setTitle:” of object button 1 with ↪  
parameter “Testing”**

**call method “selectRow:byExtendingSelection:” of object ↪  
table view 1 with parameters {1, true}**

# Call Method

- Examples of object methods

**call method “title” of object button 1**

**call method “setTitle:” of object button 1 with ↵  
parameter “Testing”**

**call method “selectRow:byExtendingSelection:” of object ↵  
table view 1 with parameters {1, true}**

# Call Method

- Examples of class methods

**call method “string” of class “NSString”**

**call method “stringWithString:” of class “NSString” with  $\neg$  parameter “Testing”**

**call method “dictionaryWithObjects:forKeys:” of  $\neg$  class “NSDictionary” with parameters  $\{\{$ “John Doe” $\}$ ,  $\neg$   $\{$ “Name” $\}$**

# Call Method

- Examples of class methods

**call method “string” of class “NSString”**

**call method “stringWithString:” of class “NSString” with  $\neg$  parameter “Testing”**

**call method “dictionaryWithObjects:forKeys:” of  $\neg$  class “NSDictionary” with parameters  $\{\{$ “John Doe” $\}$ ,  $\neg$   $\{\{$ “Name” $\}\}$**

# Call Method

- Examples of class methods

**call method “string” of class “NSString”**

**call method “stringWithString:” of class “NSString” with  $\neg$  parameter “Testing”**

**call method “dictionaryWithObjects:forKeys:” of  $\neg$  class “NSDictionary” with parameters {{“John Doe”},  $\neg$  {“Name”}}**

# Call Method

- Examples of class methods

**call method “string” of class “NSString”**

**call method “stringWithString:” of class “NSString” with ↯  
parameter “Testing”**

**call method “dictionaryWithObjects:forKeys:” of ↯  
class “NSDictionary” with parameters {{“John Doe”}, ↯  
{“Name”}}**

# Demo

**John Coelho**  
**AppleScript QA Manager**

# Jaguar Features

- Document-based applications
- Drag-and-Drop support
- Pasteboard support
- Data source improvements

# Future Features

- New “script” Property
- Improved Dictionary Viewer
- Object Hierarchy Viewer
- Improved Web Services Integration
- Other OSA Languages

# Documentation

## AppleScript Studio

- Building Applications With AppleScript Studio
  - Overview
  - Concepts
  - Programming tips
  - Tutorials
- AppleScript Studio Terminology Reference
  - Complete terminology, by suite
  - Links between classes, commands, properties, elements and constants
  - PDF only; many descriptions forthcoming

# Documentation

## More AppleScript Documentation

- AppleScript Scripting Language
- Apple Event Manager
- AppleScript Studio (Jaguar)
- Building Applications With AppleScript Studio
  - Minor additions and corrections
- AppleScript Studio Terminology Reference
  - Includes terminology for AppleScript Studio 1.2
  - Many more descriptions and examples
  - Available in HTML

# Roadmap

---

**106 AppleScript Update**

Room C  
**Wed., 9:00am**

---

**FF007 AppleScript**

Room J1  
**Thurs., 3:30pm**

---

**303 Cocoa Scripting**

Room A2  
**Thurs., 10:30am**

---

**903 Exploring the Project Builder IDE**

Hall 2  
**Wed., 5:00pm**

# Who to Contact

---

## **Jason Yeo**

Mac OS Technology Manager  
Worldwide Developer Relations  
[jason@apple.com](mailto:jason@apple.com)

---

## **Tim Bumgarner**

AppleScript Studio Engineer  
Apple Developer Technologies  
[tbumgarner@apple.com](mailto:tbumgarner@apple.com)

---

## **Chris Espinosa**

Manager, Components and Scripting  
Apple Developer Technologies  
[cde@apple.com](mailto:cde@apple.com)
